Background information: F4E and IDOM collaborate on high tech ITER systems

What is the scope of the contract?

Fusion for Energy has signed a contract for the engineering design integration of several ITER ports, which are part of the diagnostic systems of the machine.

What is the duration of the contract?

The contract will run for at least four years.

What is the value of the contract?

The overall value of the contract is in the range of 20 million EUR.

To whom is the contract awarded?

The contract is awarded to IDOM.

IDOM is an independent firm of Engineering, Architecture and Consultancy services that operates globally in areas such as power generation, oil and gas, renewable and alternative energies, manufacturing industry, civil infrastructures, nuclear facilities, and large technological and scientific projects.

With more than 2000 professionals spread across 37 offices in 20 countries all over the world, IDOM has constituted a multidisciplinary force capable of complying with the most wide-ranging requirements and the successful undertaking of complex projects.

IDOM puts particular effort in providing advanced engineering services for large technological and scientific projects. References in those fields range from world-wide outstanding wind turbine test facilities, the largest of their type telescope domes in the world, and international projects in particle physics and material science.
