Background information on the site infrastructure works contract

What is the scope of the contract?

Fusion for Energy has signed a contract for the ITER site infrastructure works, which are part of Europe's contribution to ITER.

What is the duration of the contract?

The planned duration of the contract is five years.

What is the value of the contract?

The overall value of the contract is in the range of 35 million EUR.

To whom is the contract awarded?

The contract is awarded to COMSA EMTE.

COMSA boasts an extensive record in transport infrastructures such as railways, roads and motorways, tunnels, airports, ports and underground networks. The company has also been in charge of several projects linked to infrastructure maintenance, installations, urban and housing development.

In the frame of this contract, COMSA will be responsible for the urbanisation of the ITER installations, including the construction of service roads, networks and trenches. The works also cover precipitation drainage, roads, parking and lay down areas, special foundations, outdoor lighting or sanitary and industrial water drainage.
